

### Clutch Spring Shims

1. Remove Clutch Cover.
2. Install smaller shim on clutch spyder/bottom of spring and larger on top of spring/clutch cover.
3. Use more or less shims to fine tune RPM/Spring force as desired.
4. Torque clutch cover bolts, using a calibrated torque wrench, to 95 in-lbs. (If your torque wrench goes over 200 in-lbs it is too big and should not be used for this application.)

Please email [info@firenice.us](mailto:info@firenice.us) if there is any issue with your order.
